

## Fight material variances head on.

With the PR Series press brake, you can now achieve accurate, first-time bends regardless of surface irregularities.

Integrated Process Control (IPC) delivers automatic thickness measurement and springback compensation for the easy processing of today's inconsistent materials. United with Bysoft's revolutionary software module, Bybend, test bending is effectively eliminated, giving you a better bend in less time.

For more information on how Bystronic machinery and software eliminates the "press brake bottleneck," please call **800-247-3332** or visit [www.bystronic.com](http://www.bystronic.com).

- Eliminate "press brake bottleneck"
- Automatic tool selection and mapping
- Reduce set-up time
- Accurate first-time bends
